

1    **ABSTRACT OF THE DISCLOSURE**

2            A locking device for a ceiling mounted movie player includes a mounting plate  
3    having multiple L-shaped legs and a base having multiple holes corresponding to the  
4    L-shaped legs. After the L-shaped legs are extended into the corresponding holes,  
5    relative movement of the mounting plate to the base is able to secure engagement  
6    between the mounting plate and the base.
